

Miata Roll Bar Installation

1. Remove rear tray carpet and lower convertible top. Disconnect battery.
2. Remove bolted in place silver metal support tray and seat belt plastic covers.
3. Open trunk and remove covers exposing tank cover and surrounding area.
4. Using tin snips trim paper thin "cover" metal from areas on either side of the gas tank cover, thereby allowing the roll bar to be rested in the vehicle.
5. Center roll bar in car, check to be sure roof goes up and down problem free.
6. Tack weld each cage foot in place to assure it does not move, in some cases you may encounter small gaps beneath the plates, push feet downward and tack or slip small metal shims underneath to take up space.
7. Once all four feet have been tack down, proceed to seam weld all four feet in place. Take care when welding near tanks cover and gas filler-neck lines!!!! Spray under coating on all welded areas.
8. With roll bar in place trim metal tray as needed to refit, also cut carpet to allow for re-installation. Enjoy!
